**Albatross GPS triangle yearly
subscription**

40,00€

The app required for use with an Android tablet or phone

Ground station:

Snipe

400,00€ ex. VAT

The Finch or Snipe is required. I didn't show the Finch as I very highly recommend the Snipe as it's a night and day difference of the information that's provided to the pilot via stereo earbuds. I purchased a Bluetooth dongle and a bone induction headset. This way I can hear what goes on around me while flying. Apple AirPods work great too!

You'll need a tripod to mount the tablet/phone/Snipe or fabricate a mount for your transmitter.

Airborne Equipment:

Raven 2

450,00€ ex. VAT

Notes:

-The 'Raven 2 Pro' has an airspeed port If the user so desires that information

A compensated Vario is a **must** and requires one of the TEK probes.

The difference in the probes is if you're mounting on top of the fuselage or protruding from the leading edge of the vertical tail.

V-TEK probe

40,00€ ex. VAT

TEK probe

40,00€ ex. VAT

TEK tubing

10,00€ ex. VAT
